

HUMAN EYE

Color the parts of the eye. Use the words in the box below to identify parts of the human eye. The eye is the organ that collects images and sends them to the brain, so you can see. The eye is protected by the bones of your skull and six muscles.

Light comes through the pupil which causes the cornea and lens to focus on an image. When the image is projected through the eye, onto the retina wall, the image appears upside down.

Eye Vocabulary:

- | | |
|-------------------|--------------------------|
| 1. Lens | 7. Iris |
| 2. Pupil | 8. Sclera |
| 3. Eyelid | 9. Cornea |
| 4. Retina | 10. Optic Nerve |
| 5. Choroid | 11. Tear Duct |
| 6. Vitreous Humor | 12. Retinal Blood Vessel |

ANSWERS

D=2 H=5 I=3
 C=4 G=1 K=11
 B=10 E=9 J=1
 A=13 F=8 L=6

Anatomy of the Eye

Complete the following chart, include the basic functions of each part and indicate the letter of where it is located on the eye diagram.

PART	FUNCTION	LOCATION (on diagram)
Cornea		
Iris		
Pupil		
Lens		
Ciliary Muscles *add #13 on diagram		M
Vitreous Humour		
Retina		
Optic Nerve		
Sclera
